POST PROCEDURE INSTRUCTIONS FOLLOWING:
FILLER INJECTIONS

- • Some patients may develop redness, bruising, and/or swelling to the treated area; this is normal.
- • In some instances, patients experience severe bruising, which may last for up to fourteen (14) days.
- • Ice packs should be applied immediately following treatment. We recommend fifteen (15) minutes on and fifteen (15) minutes off for three (3) to four (4) hours to minimize swelling.
- • Bruising can be treated with laser and can be performed forty-eight (48) hours after treatment. Please contact the office to schedule an appointment to have your bruising treated.
- • If you have pain in the treated area or the appearance of your skin has changed color (ashen gray), please contact us immediately.

EMERGENCY CONTACT INFORMATION

Call 212-663-0400 should you have questions or concerns regarding your treatment.
